Abstract

A handle arrangement (2) for a vehicle door with a door handle (4) mounted on its outside and a capacitive locking sensor (6) arranged in the region of the door handle (4) which is remote from the door has a capacitive sensor (8) for a convenience closing function additionally provided in the region of the door handle (4) which is remote from the door. These measures provide a user with a convenient and safe way of locking the vehicle and closing all vehicle openings.
